New Baby Enrollment (Android App)

Step 1

Open the inteli-warmer application, The starting page is site & machine validation view to validate the sitecode & machinecode from the cloud

True

False → user able to see the appropriate message over the screen

after succesfully validating the sitecode & machine code the next screen will open

Factory Specification or settings: It include the skin & air related field which is used in hardware for calculation, we store that value locally & hence connection is establish with BLE will send to hardware

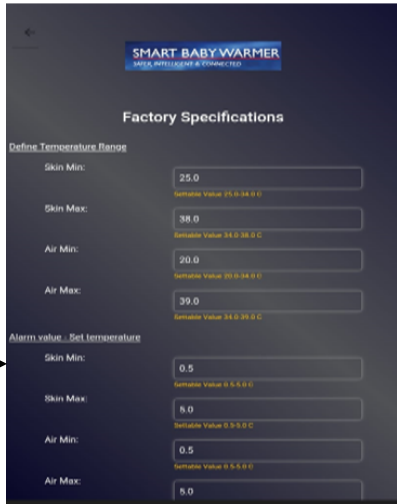

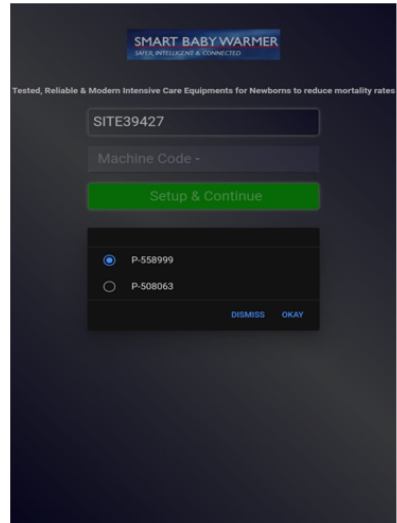

While we submit the factory specification ,it redirect to site installation page

Site installation are done with specific fields like a site code ,Qc Date, Installation date, AMC Due Date

site code ,AMC Date is automatically come through the validation API, other fields are mandatory to fill .after click the register button site & machine will be install it on cloud

if installation is done succesfully ,the next screen is open with given message.

after click the procced to start button will redirect to the dashboard page with below details(baby temp,Air Temp)

B/O

No baby admitted, please admit the baby! -
